

We do not have a button for writeback as many of our users are not that sophisticated. Here is how you get to that area.

When on a campaign page, such as  
<https://admin.cataboom.com/admin/campaign/superawesometest>

In the URL, replace the word campaign with writeback,  
<https://admin.cataboom.com/admin/writeback/superawesometest>

This will take you to the page to manage your writeback or fulfillment APIs.

Click add new writeback

Select the trigger moment for the writeback.

Add your writeback URL and token.

Either click save api changes or save and send writeback test.

This setup is per game and a single game can have multiple writeback calls as you may be sending information to multiple systems.

This is how you activate the API triggers.

Once the game is completed and triggers the API, setting up the experience post game play now depends on the desired outcome you want.
